White, 1659.

A New

# ALMANACK

And Prognostication for the  
Year of our Lord God,

1659.

Being the third after Bissextile,  
or Leap year.

Wherein is shewed the natural in-  
clination of the air, and Judgement  
of the weather, according to the Aspects  
of the Planets, and positions  
of the Stars.

With other Rules, Tables, and Directions,  
Convenient in such a work to be noted.

By William White.

Calculated for the Meridian of *Todington*  
in *Bedford-shire*, Where the Pole is Elevated  
52 Degrees and 8 Minutes.

LONDON,

Printed by Robert White, for the  
Company of Stationers. 1659.

The beginning and ending of the Terms  
with their Returns and Essoin dayes, dayes of  
exception, returna Brevium, and dayes of Appearance,  
for this year, 1659.

# Of the Ecclipses this Year. 1659.

**T**Here will appear four Ecclipses this present year, two of the Sun, and as many of the Moon: whereof both those of the Moon, and the last of the Sun, will (if the ayr be clear) be visible in *England*.

**T**He first visible Eclipse of the Moon happens upon Tuesday the 26. day of *April*, at 8 a clock in the evening, at which instant the Moon will be darkened by the shadow of the earth 8. dig. and 50. min. on the north-side of her body, and we in *England* shall see but the middle and end of this Eclipse, for the moon riseth ecclipsed 35. min. before the middle of the Eclipse. The beginning of the Eclipse at 6. and 34. min. the middle at 8. and 4 seconds, the end at 9 and 26. min.

**T**He second is an Eclipse of the Sun upon the 10. day of *May*, to be seen in *Brasilia*, *Mexicana*, *Perabuca*, and in the neighbouring places of south-*Brasilia*, but not in *England*.

**T**He third is a visible Eclipse of the Moon upon Thursday morning, being the 20. of *October*, the moon will be darkened by the earths shadow 7. digits. and 12. min. on the south-side of her body: The beginning at 1. and 40. min. The middle at 3. and 7. min. The end at 4. and 35. min. in the morning.

**T**He last is an Eclipse of the Sun, that will be visible at *Todington* (if the ayr be clear) upon Friday the 4. day of *November* in the afternoon.

The beginning at	$\left\{ \begin{array}{l} 1. \quad 51. \quad 48. \\ 3. \quad 4. \quad 30. \\ 4. \quad 30. \quad 7. \end{array} \right.$	in the afternoon.
The middle at		
The end at		

The Digits Ecclipsed are 8. and 48. min. on the South-side of his Body.

**MDCCLXIX.** 1659.

**A Prognostication for  
this Year of our LORD  
GOD, 1659.**

Being the second from *Bissextile*, or Leap-year

Wherein is contained a briefe  
computation of years.

With a Geographicall Epitome  
or Description of **ENGLAND**  
and **WALES**, &c.

*Together with all the Paires both fixed  
and moveable.*

And at the end of the book, is the whole  
Almanack, contained in one Leaf, for this  
Year 1659. which being cut out, is fit to be  
placed in a Table-Booke, Booke  
of Accompt, or other.

**LONDON,**  
Printed by E. T. for the Company of  
**STATIONERS, 1659.**

A very plain and easie table to find the  
true interest due upon any Sum of money,  
from five shillings to an hundred pounds  
for a year or under, after the rate  
of six pounds in the  
Hundred.

**A Geographickall epitomie of the Map of England and WALES,** wherein is shewed how each Shire bounded and joyned to each other, and what Point of the Compass every County lyeth from the Honourable City of London; (being lately published) the use of which, and the next Table, is explained, on the back side of the other leaf.

You may read after the next leaf the whole compass, length and breadth of England and Wales, with the chief islands of note belonging to the same. Also the compass, length, and breadth of Ireland: but for Scotland, it is to be measured, the islands being so many, barren and scattered, as above.

An alphabetically Catalogue of all the Shires, Cities, Market-Towns, Castles, Parishes, Rivers, and Parks, in every particular Shire in England and Wales; with the distance of miles, and points of the compass from London.

## The Explanation & Use of the former Map & Table

**F**irst for the Map: The figures in each shire of the map, are to shew you the names of every County, & the Letters in the same are for uses, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck. or spot therein signifieth London. Now if you would readily find the name of any Shire therein, and how many miles the middle of the said County (in a straight line) is from London, & what point of the Compass it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example, Barkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; where is shewed that the middle or heart of that Shire is 40 miles from London in a straight line, & it lyeth full west from the City, and looking forward toward the right-hand, it sheweth it hath no City, 11 Markets, 20 Towns, 2 Castles, 140 Parishes, 3 Rivers, & 13 Parks. Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which Shire is from London 35 miles, & lyeth North west & by west from the said City, it hath no City, 11 Markets, 20 Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks, and so of the rest.

The use of the Letters in the Map is this, S, Scotland, I, part of Ireland, F, part of France, M, the Isle of Man, W, the Isle of Wight, L, the Lizard point, H, Holy-head, the \* the Irish Sea, B, the British or English Sea, G, the German Sea, Ba, Barwick, D, Dover, N, Newcastle, C, the points of Compass, S, the Scale of Miles, by which you may measure the distance of any place, for every black degree is five miles, so is every white.

The 39 Shires from Barkshire to Yorkshire are the English Shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be something further in Miles to the middle of each shire, by reason of the crookednesse of the Highways, Bolls, and ballies, but what is here set down is meant in a straight line from London, as is said.

# The Compasse, Length and Breadth of *England*, and the chiefe Ilands thereof.

**E**ngland is in compasse ————— 153. miles.  
 The greatest length thereof Northwards and South-  
 wards, from Barwick to the Lands end, is — 98. miles.  
 The shortest length from Barwick to Calshot Castle in  
 Hampshire, is ————— 286. miles.  
 The broadest place from the Lands end to Sandwich,  
 is ————— 279. miles.  
 from S. Davids in the west in Pembroke-shire, through  
 the midst of Worcester and Warwick-shire Eastward to  
 Yarmouth in Norfolk, is ————— 240. miles.

## The Ile of M A N.

The Ile of Man is in compasse ————— 91. miles.  
 The length is ————— 28. miles.  
 The breadth is ————— 18. miles.

## The Ile of A N G L E S E A.

The Ile of Anglesea is in compasse ————— 85. miles.  
 The length is ————— 21. miles.  
 The breadth is ————— 28. miles.

## The Ile of W I G H T.

The Ile of Wight is in compasse ————— 57. miles.  
 The length is ————— 22. miles.  
 The breadth is ————— 11. miles.

## The Compasse, Length, and Breadth of

### I R E L A N D.

Ireland, respecting the adjacent Ilands, and some Rudrass,  
 is in compasse ————— 948. miles.  
 The length North and South, is ————— 303. miles.  
 The breadth East and West, is ————— 113. miles.

Since the States Government, 10. years.

# A Prognostication.

## The use of the Table of Kings.

This table of the Kings, I suppose may be necessary in the searching out the antiquity of many old evidences, which are dated many times by the years of the Kings then reigning, and not by the years of our Lord.

### Example.

How long is it since the 10 year of King James:  
Which is thus found.

King James began to reign Anno Domini 1602  
to which adde the 10 years

So it is Anno Domini

which subtracted from

the present year

there remains the years since.

How to judge what Weather will follow, by  
the rising and setting of the Sunne.

**T**he Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promisseth rain. If in his rising he be thinly overcast with a cloud, it betokeneth foul weather: If the sun or the clouds be fore him into the West, it signifieth fair weather: If at his rising there appear a circle about him, & vanish away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or clouds like water, it threatneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds it signifieth great winds: If at his rising there appear a thick mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also if the Sun beams be spotted either green, pale, or black, or gathered to a cloud, it signifieth rain. The Sun setting clear with out any cloud, signifieth a fair night to ensue. If the  
circle

circle, or circles about the Sun be clear, & of no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more vehement winds. If the circles are here & there broken, & are thick & black, look for cold wind or snow: or if he settle behind a great black cloud, rain follows.

How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or 3 dayes before her full, or in the midst of the quarter, be found of pure light, nothing compassing her, the ends direct up, she promisseth faire weather: but bent to red colour, proboketh winds. The Moon pale, or somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the tips of her horns, if they be blunt, it signifieth rain: if sharp pointed & picking upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, it betokeneth great windes and moisture in that part where they seem so; and in Winter, great frosts. When dim Stars appear with long fiery rayes, it threatneth winds, and great drought: the more in number, the greater will be the effect. Also when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in divers places, it signifieth divers windes: If in all places, windes, thunder, lightning, and most tempestuous weather.

How to judge of the weather by the Clouds.

Black clouds flying from the east, signifieth Rain at night, if from the west, rain the next day; if they fly low, and appeare to settle upon the tops of hills, it is a signe of cold weather, if they

be full charged, and appear white like towers, hail is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a signe of cold and snow, but black clouds signifie rain. A red sky in the evening, and a gray morning is a sign of a fair day. Mists falling in the morning, in spring or harvest, also mists over ponds or waters in the morning shew rain. If the clouds fly swiftly in the ayre, it signifies rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places like flocks, or heaps of wool appear in many places, it is a sign of rain: but if thick dark clouds towards the north or west near the earth, presently rain, and if like hills a little above the earth, foul weather is over. If mists descend from the hills, and settle in the valleys, it is a sign of fair hot weather next day, or if white mists arise from the waters in the evening.

How to judge of the weather by the Rain-bow.

**T**he natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a signe of foul weather: when it is foul if it appear, it is a sign of fair weather, the greener it appears the more rain, the redder the more wind; if before noon then the rain is spent; if the rain-bow appear about one or two in the afternoon then rain is near. A rainbow in the morning is a sign of wet (unless there be drought in the air) if it appear in the evening, it is a sign of fair weather (unless the air abound with moisture.) A rain-bow at night opposite to the moon, is a sign of much small rain and wind to follow. A rain-bow after long rain is a sign of fair weather presently; if two rain bows appear together, it is a sign of rain within one or two days after.

# The Tide Table.

1	London, Tinmouth, Hartlepool, Whit- bay, Amsterdam, Rotterdam. 3W.	b. m.	0 0

The difference of the Tides in these places from London.

This Table shews what D makes an high tide at the new and full, and also the difference of the Tides in these places from the Tides at London Bridge: Therefore if you adde this difference of any place to the time of high Tide at London any day (as it is set down in the Almanack) so you shall have the true time of the Tide in any of these places. Note if your sum exceed twelve hours, to count onely the over plus.

A

White. 1659.

A Table to know how many Hours and Minutes the Moon shineth every Night in the Year.

The age of the Moon encreasing.		The Houres and Minutes that she shineth.		The age of the Moon decreasing.	
The Moons night shining.	☾	Houres.	Minutes.	The Moons morning shining.	☾
	1	0	48		29
	2	1	36		28
	3	2	24		27
	4	3	12		26
	5	4	0		25
	6	4	48		24
	7	5	36		23
	8	6	24		22
	9	7	12		21
	10	8	0		20
	11	8	48		19
	12	9	36		18
	13	10	24		17
	14	11	12		16
	15	12	0		15

The use of this Table.

**S**eeke the age of the Moon in the Almanack, then look the same in this Table, which you shall find either in the increasing or decreasing, and then in the middle Columnne you shall without further labour find the time of her shining.

As for Example: Upon the 9 day of January, I would know how many houres and minutes the Moon shineth: I find in the Almanack it is new Moon the 5 day: then reckoning from the 5 day, I find she is 5 dayes old: Then entering this Table, it sheweth, she shineth 4 houres and 0 minutes: So doth she likewise when she is 25 dayes old, &c.

## A Prognostication.

The Explanation of a new and easie KALENDAR here following, for this present Yeare, 1659

**N**Ote that every Month containeth three Rows of Columns (the Figures for the number of daies excepted) The first Columne toward the left hand containeth the Week Dayes and Sunday Letter; the second the Signe wherein the Moon is every day. And the third the Changes & Quarters of the Moon. Note that the being thus O figured, doth signify the New Moon; & placed thus way is the first Quarter: thus ☾ the Full Moon; and again thus ☽ the last Quarter. Note also that the Figures over the head of the Moon, doe signify the howe of her Change, Full, or Quarters, and the Letters above or beneath, the time after noon, or after midnight, N standing for After noon till Midnight, and M for After Midnight till Noone.

As for example, against the 12 Day of January, being Wednesday, I do find the Moon (or Sign) in Capricorn, or the knees, and is thus O charactered, which is the change of new Moon at 9 at night. Again, on March the 25 day being Sunday, I do find the Moon in Cancer, or the breast, and is thus I charactered, which is the first Quarter at 11 at night; and so of the rest.

Note also, that at the head of every month is placed the rising and setting of the Sun for the midst of every month: As for example, for the midst of January, the ☉ riseth at 7. of the clock and 44 minutes; and setteth at 4, and 16 minutes, &c.

It also containeth (on the back side of the Leaf) for every month the Feastes both Moveable and Fixt, with the beginning and ending of every Terme: As Twelfth day is on the 6. of January, Easter day is on the 3 of April, Whitsunday is on the 22 of May. Terme begins on the 1 of June, and endeth on the 21 of June, &c.

A briefe and easie Almanack for this Year  
 1659. which being cut out, is necessary to be  
 placed into any Book of Accompts, Table-book,  
 or other, coneyning the whole Kalendar, in  
 a short method; By *William Whittle.*
